PROFESSIONAL SUMMARY

Machine learning and data science trainee with a quantitative foundation in probability, statistics, and linear algebra through a B.Sc. in Computer Science & Statistics (GPA 3.64/4.00). Hands-on project experience in ML pipelines, model comparison and evaluation, NLP intent classification, multimodal phishing detection, data-quality checks, and analytics. Interested in AI training and evaluation tasks requiring rigorous reasoning, careful instruction-following, consistency checking, and clear written explanations.

CORE SKILLS

AI / ML	Supervised learning, classification, feature engineering, model comparison and evaluation, confusion matrices, error analysis, dataset auditing, label-leakage checks, NLP (TF-IDF), scikit-learn, XGBoost
Math & Statistics	Probability, random variables and distributions, conditional probability, Bayes' theorem, descriptive and inferential statistics, hypothesis testing, correlation, regression, vectors, matrices, linear transformations
Programming & Data	Python, SQL, C++, JavaScript (basic), Pandas, NumPy, Matplotlib, Seaborn, data cleaning, preprocessing, EDA
Tools & Reporting	Git/GitHub (branches, issues, pull requests), Jupyter, pytest, Excel, Power Query, Power BI

SELECTED PROJECTS

PhishGuard AI — Multimodal Phishing Website Detector

GitHub repository

- Team graduation project combining URL/domain features, HTML/DOM structure, and screenshot-based signals (OCR, logo detection, and a Vision Transformer) in a browser-extension workflow.
- Built data from OpenPhish and Tranco sources; audited feature/label construction and identified label leakage, then revised the plan toward clean public data and fresh-data generalization checks.
- Debugged data-pipeline issues including missing WHOIS data and incorrect domain-age inheritance for free-hosting subdomains.

AI Sound OS — Voice-Controlled Linux System

GitHub repository

- Built a voice-to-action pipeline using Whisper speech-to-text, TF-IDF + Logistic Regression intent classification, parameter extraction, and Python-based Linux command execution.
- Handled eight command intents plus an UNKNOWN class; compared four candidate models and evaluated with metrics, confusion matrix, error analysis, and pytest tests.

Telecom Customer Churn Analysis

GitHub repository

- Cleaned data, handled outliers, engineered features, and performed correlation analysis/EDA on a telecom dataset of approximately 70,000 customers.
- Examined churn patterns by usage and tenure, including a 77.9% churn rate among customers with zero usage in the latest month versus 4.4% among active customers.

Restaurant Sales Analytics & Power BI Dashboard

GitHub repository

- Cleaned and prepared 15,000+ sales records in Python; built a Star Schema, wrote 38+ SQL queries, and created Excel KPIs and an interactive Power BI dashboard.

EDUCATION

B.Sc. Computer Science & Statistics

Expected graduation: 2028

Faculty of Science, Helwan University | GPA: **3.64 / 4.00**

Relevant coursework: Probability, Statistics, Linear Algebra, Data Science, Python for Data Analytics, Data Structures, Algorithms, Database Systems

Languages: Arabic (Native) | English (B2, Upper Intermediate)

TRAINING & CERTIFICATIONS

Machine Learning Training — Information Technology Institute (ITI) — July–August 2026
Completed two-month training in core ML concepts and hands-on model building.

DEPI — AI & Data Science, Microsoft Machine Learning Engineer Track — 2026–Present
Project-based training in Python, statistics, machine learning, and deep-learning fundamentals.

Microsoft Data Analyst Professional Certificate — Completed February 2026

IBM Data Science Professional Certificate — In progress

CS50: Introduction to Computer Science — Harvard University
